

## NATIONAL INSTRUMENTS CASE STUDY

# C2P Preserves NI Compliance Knowledge in One Place

## Tyler Shanks, Environmental Program Manager, NI

At NI, we equip engineers and scientists with systems that accelerate productivity, innovation, and discovery. As environmental program manager for the company, I need to ensure our products meet current, stringent environmental compliance legislation as well as be prepared for regulatory changes coming down the line. Working across multiple industries, from aerospace to life sciences and from energy to consumer electronics, we need to interpret the applicability of regulatory changes to NI's product portfolio and develop systems to ensure we are compliant.

### How NI Uses C2P:

- Daily email alerts on topics of interest
- Assessments to see whether a new piece of legislation is relevant
- Tasks – assigning ownership and action items
- Entering comments
- Alert sharing with other members of the organization

By monitoring the daily update alerts that C2P provides, we not only immediately understand new and proposed regulatory changes but also can actively participate in industry organizations. We can monitor the alerts and react in time, across our whole business, to meet new requirements. Building on this, the C2P management tools allow us to evaluate legislation just once and document it. Anytime we have questions, C2P serves as our single source for these assessments. It may not be obvious, but companies spend a significant amount of time assessing the same law, which wastes time and resources.

### Advantages of using C2P:

- Prevention of repeatedly assessing the same law
- Single resource for compliance legal developments
- Expert commentary from legal specialists
- Ability to track laws as they evolve through legislative bodies globally
- Secure preservation of our corporate compliance knowledge in one place

C2P offers a single source for monitoring new and changing legislation. And because of the way C2P structures the information, it also provides the ability to monitor, track, and assess different portions of laws and their applicability across various portions of the organization. For instance, C2P allows reviewing a law at a low level, forwarding questions to our legal team, tracking all of the conversations along with the law, and storing that data in one location.

### About NI

Since 1976, NI ([www.ni.com](http://www.ni.com)) has made it possible for engineers and scientists to solve the world's greatest engineering challenges with powerful, flexible technology solutions that accelerate productivity and drive rapid innovation. Customers from a wide variety of industries – from healthcare to automotive and from consumer electronics to particle physics – use NI's integrated hardware and software platform to improve the world we live in. The company has revenue in excess of \$1 billion and employs approximately 7,100 in nearly 50 countries.
